

Database Processing Verification

This report assesses application servers and application clusters added to the protection groups of Veeam Enterprise Application Plug-ins and lists databases that have been and have been not processed during a specified period of time. This helps to identify databases that have been not added to the backup policies, and databases for which the job sessions have failed. Supported platforms: SAP HANA , Oracle RMAN, SAP on Oracle.

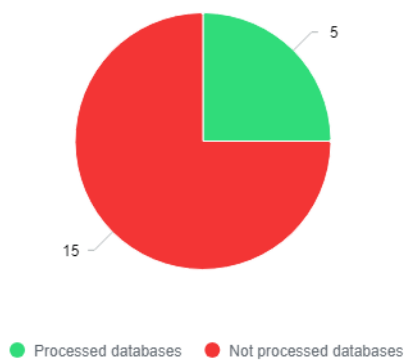

Report Parameters

Infrastructure objects:	Veeam Backup & Replication
RPO:	24 hours (9/15/2025 8:00 PM - 9/16/2025 8:00 PM)
Platforms:	All items
Backup policies:	All items
Database exclusion rule:	—

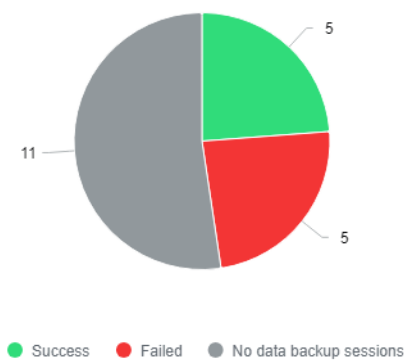

Summary

Total databases:	20
Processed databases:	5
Not processed databases:	15
Oracle databases:	3
Processed Oracle databases:	0
Not processed Oracle databases:	3
SAP HANA databases:	15
Processed SAP HANA databases:	5
Not processed SAP HANA databases:	10
SAP on Oracle databases:	2
Processed SAP on Oracle databases:	0
Not processed SAP on Oracle databases:	2

Databases by Processing State

Databases by Latest Backup Session Status

Databases by Platform by Processing State
